

## GUIDE TO SHELF LIFE OF INSULATION PRODUCTS AND ACCESSORIES

The recommended shelf life of **Elastomeric** and **Polyolefin** insulation products is one year from receipt of goods. However, if stored using good warehouse practices, the shelf life can be extended much longer. Following recommended first-in first-out warehouse procedures, we would expect that most products would be stored one year or less.

The recommended shelf life for polyolefin and elastomeric insulation products with PSA backing or seams, **Elastomeric Tape, 320, 620, 373 Adhesives and 374 Protective Coating** is one year from date of receipt.

In all cases the products should be stored in the original containers, indoors, not exposed to dirt, direct sunlight and other elements, at temperatures ranging from 60° F to 80° F. The material should not be compressed during storage.

Reference **Nomaco Insulation** Product Data Sheets for more detailed information about the products listed above.
